Product fact sheet #E1-Tx-L3-C5 for the health market

E1-Tx-L3-C5 Rehabilitation

Vocational workers with qualifications in rehabilitation at RKK College level (Lev. 3) have a basic understanding of rehabilitation processes and skills. We offer further education courses for health and social care workers with upper secondary education, assistant occupational therapist education or equivalent. The education is practical and vocationally-oriented. Our instructors have professional education at college/university level with specialism in the professional area and teaching qualifications.

Target group

People with an interest in rehabilitation, and who would like a deeper professional and personal competence within this field, who want to acquire the competence to work with rehabilitation, and who also would like to contribute to the build-up of a professional service offer in hospitals and local rehabilitation institutions.

Objectives

RKK Technical College education in Rehabilitation is designed to educate reflective professionals for the specialist and local authority health services. Through this education you will acquire broad competence in rehabilitation at both individual and systemic level. You will learn how you can help the user to exercise greater influence over his/her own rehabilitation process and how you can encourage user co-determination at systemic level.

Prerequisites

Health and social work personnel with upper secondary education, assistant occupational therapist education or equivalent.

Course E1-Tx-L3-C5 Rehabilitation comprises the following modules

Module 1: Common topics

Module 2: Target group for rehabilitation

Module 3: Rehabilitation as a professional activity

Module 4: The rehabilitation process and individual planning

Module 5: More advanced topics in rehabilitation

Duration

2-year part time.
