

Health, Safety and Environment

RKK HSE courses for the industry market comprise various levels of training. From introductory to advanced levels, you can develop your knowledge and skills in our flexible training programmes.

Our courses build on the best practise from international and Norwegian expertise in the various areas of health, safety and environment.

Flexible - net supported - workshop - classrom

Product fact sheet #A5 for the industry market

The RKK HSE courses comprise two specialized areas:
A5-T1 General HSE
A5-T2 Safety and emergency

Curricula and content

Our courses cover training according to international and Norwegian standards. Covering both secondary and tertiary vocational education levels. The courses are adapted to allow for maximum flexibility and adjustment to the actual needs of each client. This allows for a competence profile and gap analysis defining the basis for our training schemes. Adjustments to fit internal requirements are possible.

Delivery methods

Our blended learning model comprises net supported learning portals, video, practical workshops and classroom demonstration and both live and web streamed lectures. More than 15 years of experience in ICT supported learning methods ensures that both instructors and participants are tuned in to teaching and learning as flexible and efficiently as possible. This improves both the quality of the learning as well as cost efficiency.

Assessment and documentation

Depending on the training scheme and level of training, participants are subject to examination and assessments according to international standards, and will receive either education programme diploma, a certificate issued by 3rd party assessor or a course certificate. If required we will support you with recertification reminders as part of our client care service.
